ALT R230 Membrane Protected Roof Assembly (PRMA) Specification

Technical Data Sheet

PART 1 GENERAL	
System:	New cold liquid-applied reinforced roof membrane system, including all other ancillary roof work but not limited to installation of roof insulation, drainage mat, filter fabric, ballast system, drain, penetration and perimeter flashings, sealants and metal work as specified.
Weather Restrictions:	Do not apply membrane during or with the threat of inclement weather. Application of cold liquid- applied reinforced membrane may proceed while air temperature is between 32° F (0° C) and 95° F (35° C) for ALT primers and finish or 23° F (-5° C) and 95° F (35° C) for ALT R230 membrane, providing the substrate is a minimum of 5 degrees above the dew point temperature, clean and dry.
Roofing Warranty:	Manufacturer's Warranty: Provide 20-year standard manufacturer's warranty under provisions of this section.

Membrane: Cold liquid-applied reinforced membrane with non-woven reinforcing fabric, for a finished dry film membrane thickness of .080 inch nominal per ply; slip-resistant aggregate and colored topcoat finish as selected by owner from manufacturer's standard palette of colors; conforming to ASTM C 836. Subject to compliance with requirements, provide ALT R230 resin for use in an adhered membrane waterproofing and surfacing system. Flashing: Cold liquid-applied membrane with a non-woven reinforcing fabric, for a finished dry film membrane waterproofing and surfacing system. Accessories: Cold ion: nominal per ply; integral color finish as selected by owner from manufacturer's standard palette of colors; conforming to ASTM C 836. Subject to compliance with requirements, provide ALT R230 Thixo resin for use in an adhered flashing membrane system. Accessories: Provide resin primers, additives, surfacing topcoats, and accessory products as required or recommended by the Membrane Manufacturer. Drainage Mat: Drainage composite consisting of a pre-engineered three dimensional, high-impact polystyrene core, and a non-woven filter fabric bonded to the individual dimples of the molded core as required or recommended by the Membrane Manufacturer. Insulation: Insulation insulled above the new membrane as an overlay, protection layer and/or to obtain the desired thermal value. Foam roof insulation shall be minimum 2" thick closed-cell extruded expanded polystyrene (XEPS) board meeting ASTM C78, Types IV, VI or VII physical properties with natural skin surfaces; with minimum compressive strength or 40 psi, nominal 1.8 pcf density, maximum water absorption of <0.1% per ASTM C272; using non-HCFC hydrocarbon blowing agents.	PART 2 PRODUCTS	
Flashing: Cold liquid-applied membrane with a non-woven reinforcing fabric, for a finished dry film membrane thickness of .080 inch nominal per ply; integral color finish as selected by owner from manufacturer's standard palette of colors; conforming to ASTM C 836. Subject to compliance with requirements, provide ALT R230 Thixo resin for use in an adhered flashing membrane system. Accessories: Provide resin primers, additives, surfacing topcoats, and accessory products as required or recommended by the Membrane Manufacturer. Protection Layer: Acceptable pre-engineered drainage composite or 1/8" to ¼" (3.2 to 6.4 mm) asphalt hardboard as required or recommended by the Membrane Manufacturer. Drainage Mat: Drainage composite consisting of a pre-engineered three dimensional, high-impact polystyrene core, and a non-woven filter fabric bonded to the individual dimples of the molded core as required or recommended by the Membrane Manufacturer. Insulation: Insulation installed above the new membrane as an overlay, protection layer and/or to obtain the desired thermal value. Foam roof insulation shall be minimum 2" thick closed-cell extruded expanded polystyrene (XEPS) board meeting ASTM C578, Types IV, VI or VII physical properties with natural skin surfaces; with minimum compressive strength of 40 psi, nominal 1.8 pcf density, maximum water absorption of <0.1% per ASTM D24572, using non-HCFC hydrocarbon blowing agents. Filter Fabric: Lightweight water-resistant polyester fiber mats or polypropylene- polyethylene, non-woven, non-biodegradable geo-textile fabric with minimum 4.0 oz/SY fabric weight, 60 mil thickness per ASTM D-4533, 65 lb puncture strength per ASTM D-4632, 45 lb trapezoid tear strength per ASTM D-44533, 65 lb puncture	Membrane:	membrane thickness of .080 inch nominal per ply; slip-resistant aggregate and colored topcoat finish as selected by owner from manufacturer's standard palette of colors; conforming to ASTM C 836. Subject to compliance with requirements, provide ALT R230 resin for use in an adhered membrane
recommended by the Membrane Manufacturer.Protection Layer: (optional)Acceptable pre-engineered drainage composite or 1/8" to ¼" (3.2 to 6.4 mm) asphalt hardboard as required or recommended by the Membrane Manufacturer.Drainage Mat: (optional)Drainage composite consisting of a pre-engineered three dimensional, high-impact polystyrene core, and a non-woven filter fabric bonded to the individual dimples of the molded core as required or recommended by the Membrane Manufacturer.Insulation:Insulation installed above the new membrane as an overlay, protection layer and/or to obtain the desired thermal value. Foam roof insulation shall be minimum 2" thick closed-cell extruded expanded polystyrene (XEPS) board meeting ASTM C578, Types IV, VI or VII physical properties with natural skin surfaces; with minimum compressive strength of 40 psi, nominal 1.8 pcf density, maximum water absorption of <0.1% per ASTM C272; using non-HCFC hydrocarbon blowing agents.	Flashing:	Cold liquid-applied membrane with a non-woven reinforcing fabric, for a finished dry film membrane thickness of .080 inch nominal per ply; integral color finish as selected by owner from manufacturer's standard palette of colors; conforming to ASTM C 836. Subject to compliance with requirements,
(optional)required or recommended by the Membrane Manufacturer.Drainage Mat: (optional)Drainage composite consisting of a pre-engineered three dimensional, high-impact polystyrene core, and a non-woven filter fabric bonded to the individual dimples of the molded core as required or recommended by the Membrane Manufacturer.Insulation:Insulation installed above the new membrane as an overlay, protection layer and/or to obtain the desired thermal value. Foam roof insulation shall be minimum 2" thick closed-cell extruded expanded polystyrene (XEPS) board meeting ASTM C578, Types IV, VI or VII physical properties with natural skin surfaces; with minimum compressive strength of 40 psi, nominal 1.8 pcf density, maximum water absorption of <0.1% per ASTM C272; using non-HCFC hydrocarbon blowing agents.	Accessories:	
 (optional) and a non-woven filter fabric bonded to the individual dimples of the molded core as required or recommended by the Membrane Manufacturer. Insulation: Insulation installed above the new membrane as an overlay, protection layer and/or to obtain the desired thermal value. Foam roof insulation shall be minimum 2" thick closed-cell extruded expanded polystyrene (XEPS) board meeting ASTM C578, Types IV, VI or VII physical properties with natural skin surfaces; with minimum compressive strength of 40 psi, nominal 1.8 pcf density, maximum water absorption of <0.1% per ASTM C272; using non-HCFC hydrocarbon blowing agents. Filter Fabric: Lightweight water-resistant polyester fiber mats or polypropylene- polyethylene, non-woven, non-biodegradable geo-textile fabric with minimum 4.0 oz/SY fabric weight, 60 mil thickness per ASTM D-1777, 50% elongation strength per ASTM D-4632, 45 lb trapezoid tear strength per ASTM d-4533, 65 lb puncture strength per ASTM D-4833, and 140 gpm/ft² water flow rate per ASTM D-4491. Provide polymer filter fabric as a ballast retainer between top of insulation layer and ballast. Roof Ballast: Provide screened, washed stone gravel meeting ASTM D-448, gradation #57; or ballast pavers nominal 24" x 2" thick with a compressive strength greater than 6,500 psi per ASTM C140, Flexural strength greater than 600 psi per ASTM C293, water absorption not greater than 5% per ASTM C140, Freeze/Thaw loss less than 1% dry weight (50 cycles) per ASTM C67, and a centered load capability of 1,750 lbs. minimum. 		
Insulation: Insulation installed above the new membrane as an overlay, protection layer and/or to obtain the desired thermal value. Foam roof insulation shall be minimum 2" thick closed-cell extruded expanded polystyrene (XEPS) board meeting ASTM C578, Types IV, VI or VII physical properties with natural skin surfaces; with minimum compressive strength of 40 psi, nominal 1.8 pcf density, maximum water absorption of <0.1% per ASTM C272; using non-HCFC hydrocarbon blowing agents. Filter Fabric: Lightweight water-resistant polyester fiber mats or polypropylene- polyethylene, non-woven, non-biodegradable geo-textile fabric with minimum 4.0 oz/SY fabric weight, 60 mil thickness per ASTM D-1777, 50% elongation strength per ASTM D-4632, 45 lb trapezoid tear strength per ASTM d-4533, 65 lb puncture strength per ASTM D-4833, and 140 gpm/ft ² water flow rate per ASTM D-4491. Provide polymer filter fabric as a ballast retainer between top of insulation layer and ballast. Roof Ballast: Provide screened, washed stone gravel meeting ASTM C293, water absorption not greater than 5% per ASTM C140, Freeze/Thaw loss less than 1% dry weight (50 cycles) per ASTM C67, and a centered load capability of 1,750 lbs. minimum.		Drainage composite consisting of a pre-engineered three dimensional, high-impact polystyrene core, and a non-woven filter fabric bonded to the individual dimples of the molded core as required or

PART 3 EXECUTION		
Preparation:	All substrates must be free from gross irregularities, loose, unsound or foreign material such as dirt, ice, snow, water, grease, oil, release agents, lacquers, or any other condition that would be detrimental to adhesion of the primer and/or resin to the substrate. All traffic bearing surfaces require scarifying, sandblasting or grinding to achieve a suitable substrate.	
	prepared as required to provide adhesion of the membrane to substrate with minimum bond strength of 116 psi (0.8 N/mm ²) for roofing applications or 219 psi (1.5 N/mm ²) on concrete for traffic surfacing applications. Determinations of bond strength and moisture content shall be performed periodically by the Contractor throughout the course of work.	
Primer:	Prime all substrates as recommended or required by Membrane Manufacturer. Primer is required on asphalt, concrete, wood and metals. For other substrates, contact the Membrane Manufacturer for recommendations.	
	<u>Asphalt/Concrete/Wood:</u> Apply two-component ALT Primer with a lambswool roller. Minimum consumption: 0.037 kg/ft ² (0.4 kg/m ²) Cure Time: Minimum of 45 minutes.	
	<u>Metal:</u> Apply single-component ALT Metal Primer with a lambswool roller. Minimum consumption: 0.016 - 0.02 kg/ft ² (0.17 – 0.2 kg/m ²) Minimum Cure Times: 1-hour minimum @ 86° F (30° C) 2-hours minimum @ 68° F (20° C)	
	3-hours minimum @ 50° F (10° C) 4-hours minimum @ 38° F (3° C) *Note: Consumption and yield or primer will vary depending upon smoothness and absorbency of the	
Flashing:	substrate. Apply an even base layer of ALT R230 Thixo resin, work ALT Fleece reinforcement into the wet resin saturating from the bottom up removing trapped air using a lambswool roller. Apply supplemental ALT R230 resin directly over the fleece as required to complete saturation and allow to cure until solid.	
	Base Coat: Minimum consumption of 0.21 kg/ft ² (2.3 kg/m ²) Top Coat: Minimum consumption of 0.09 kg/ft ² (1.0 kg/m ²)	
	Laps/Seams: Maintain a minimum 2-inch (5 cm) overlap at all side laps of adjacent fleece rows and 4-inch (10 cm) overlaps at butt laps, tie-ins and flashings (reinforcing and resin).	
Main Deck Roof	Curing: ALT R230 membrane is rainproof after approximately 30-minutes, and can be walked-on or top coated with aesthetic and/or skid resistant surface topcoat in approximately 45-minutes. Apply an even base layer of ALT R230 resin, work ALT Fleece reinforcement into the wet resin

	Laps/Seams: Maintain a minimum 2-inch (5 cm) overlap at all side laps of adjacent fleece rows and 4-inch (10 cm) overlaps at butt laps, tie-ins and flashings (reinforcing and resin).	

Main Deck Roof	Curing:
Membrane:	ALT R230 membrane is rainproof after approximately 30-minutes, and can be walked-on or top
(cont.)	coated with aesthetic and/or skid resistant surface topcoat in approximately 45-minutes.
Staging:	In a normal ALT R230 membrane application, flashings are installed first, followed by the application of the deck waterproofing, aggregate surfacing and seal-coats.
	Work Interruptions: If work is interrupted for more than 12-hours, use ALT Activator to reactivate the transition area. ALT Activator should be allowed a minimum of 20-minutes evaporation time after application, and over-coated within 60-minutes of application. Re-apply ALT Activator as required to assure proper reactivation of transition areas.
	Tie-ins: For all tie-in locations, provide a minimum overlap of 4 inches (10 cm), reinforcing fabric and resin.
Water Testing:	Prior to applying aggregate finish and seal-coat, flood test all horizontal applications with a minimum 2" (51 mm) head of water for 24 hours. Mark any leaks and repair when the membrane is dry. Before flood testing, be sure the structure will withstand the dead load of the water. For well-sloped decks, segment the flood test to avoid deep water near drains.
	Conduct the flood test after completing the ALT R230 membrane application. Immediately after the flood test and all necessary repairs are made apply surfacing and finish.
Protection Layer: (as required)	Where required, install acceptable protection layer between membrane and ballast when insulation overlay not used or required.
Drainage Mat: (as required)	Where required, install acceptable drainage mat between membrane and insulation layer to facilitate movement of water to drain locations.
Insulation:	Where required, install acceptable roof board insulation in accordance with insulation manufacturer's requirements. Insulation may be spot adhered to membrane using acceptable polyurethane foam adhesive.
Filter Fabric:	Install filter fabric in accordance with the Membrane Manufacturers recommendations or requirements. Install filter fabric between membrane and ballast, or between insulation and ballast on insulated assemblies, as a filter fabric/ballast retainer.
Ballast:	Install roof ballast immediately following installation of protection layer, insulation and/or filter fabric to prevent displacement of loose laid components and protect roof membrane assembly.
Protection:	Upon completion of new work (including all associated work), institute appropriate procedures for surveillance and protection of finished work during remainder of construction period. Protect all areas where membrane has been installed.
